

The Men and Mice CLI (mmcmd)

Please note that the Men & Mice command line is no longer being maintained and will be deprecated in a future version of the Men & Mice Suite.

The Men & Mice Command Line Interface (CLI) contains various commands to help you manage your network address space from the command line.

You can use the CLI interactively, executing one command at a time, or you can run script files to execute multiple commands in one batch.

Script files can be supplied as arguments when starting the CLI and they can be run from within the CLI using the execute command.

This document contains a list of the commands supported by the CLI and an example script to help you get started.
