

7.1.3

7.1.3

March 3rd, 2016

Men & Mice Announces the release of version 7.1.3 of the Men & Mice Suite. This is a maintenance release containing a few bug fixes as well a bug fix in a 3rd party software on the Men & Mice appliances.

- The glibc library on the Men & Mice appliances was updated to fix the CVE-2015-7547 vulnerability
- It is now possible to disable unreachable DHCP servers
- Issues were fixed that could cause the health bar to crash MMC under unusual circumstances
- It is no longer possible to create saved filters for AD Sites
- A bug was fixed where an AD forest could not be changed to/from read-only
- It is now possible to create forward zones on caching DNS servers
